

## **The Architecture MasterPrize**

*A global benchmark for architecture and design*

The Architecture MasterPrize (AMP, formerly American Architecture Prize) is an award program created with the core mission to advance the appreciation of quality architectural design worldwide. In its 2018 edition, AMP received entries from 68 countries around the world, representing the best and most cutting-edge designs in architecture, interior design and landscape design.

The most outstanding of these projects have been distinguished and awarded by our illustrious international jury of architects, designers, curators, editors and academics, and have garnered recognition from the global media for their innovative and groundbreaking designs.

The award program's influence in the field of architecture around the globe has grown exponentially in the 3 years since its inception and, as a result, in 2018 it has been reborn as the Architecture MasterPrize, to reflect our universal vision:

- To advance the appreciation of quality architectural design around the world,
- To celebrate the greatest achievements in architecture, interior design and landscape design,
- To showcase the world-class talent and visionaries in these fields.

We believe this name represents the mastery, excellence, creativity and innovation exhibited in all the visionary works that have been entered to win this prize, from all over the world.

The Architecture MasterPrize recognizes those individuals and teams who push boundaries, set new standards, and turn the ordinary into the truly extraordinary. We understand the complex and often uphill process of envisioning a truly exceptional design and bringing it to life—exploring possibilities, tackling unforeseen problems with new solutions, understanding trends and seeing beyond them. These are the true visionaries, seeing the world as it could be, and creating and building what has only been imagined.

We are proud to share the 2018 winners of this prestigious and world-renowned award, and celebrate with them the great success that it represents. And truly, these achievements are a win for all those who will benefit from these innovative designs in the future.
